

D1 dispersion medium from a sol in which the perovskite titanium-containing composite oxide particle is dispersed, wherein said sol is obtained by a process comprising the step of reacting a titanium oxide particle comprising brookite crystalline form with a metal salt comprising at least one of Ca, Sr, Ba, Pb, or Mg in a liquid phase.

---

D2 17. (three times amended) The perovskite titanium-containing composite oxide particle as claimed in claim 1, wherein the particle is obtained by removing a dispersion medium from a sol in which the perovskite titanium-containing composite oxide particle is dispersed, wherein said sol is obtained by a process comprising the step of reacting a titanium oxide sol prepared by subjecting a titanium salt to hydrolysis in an acid solution with a metal salt comprising at least one of Ca, Sr, Ba, Pb, or Mg in a liquid phase.
